Experiment 6: Building an Anonymous FTP Scanner Using Python ftplib Module

Aim - To develop an Anonymous FTP Scanner using Python's ftplib module to identify FTP servers that allow anonymous login.

Requirements

Hardware

• Laptop/Desktop

• Minimum 4 GB RAM

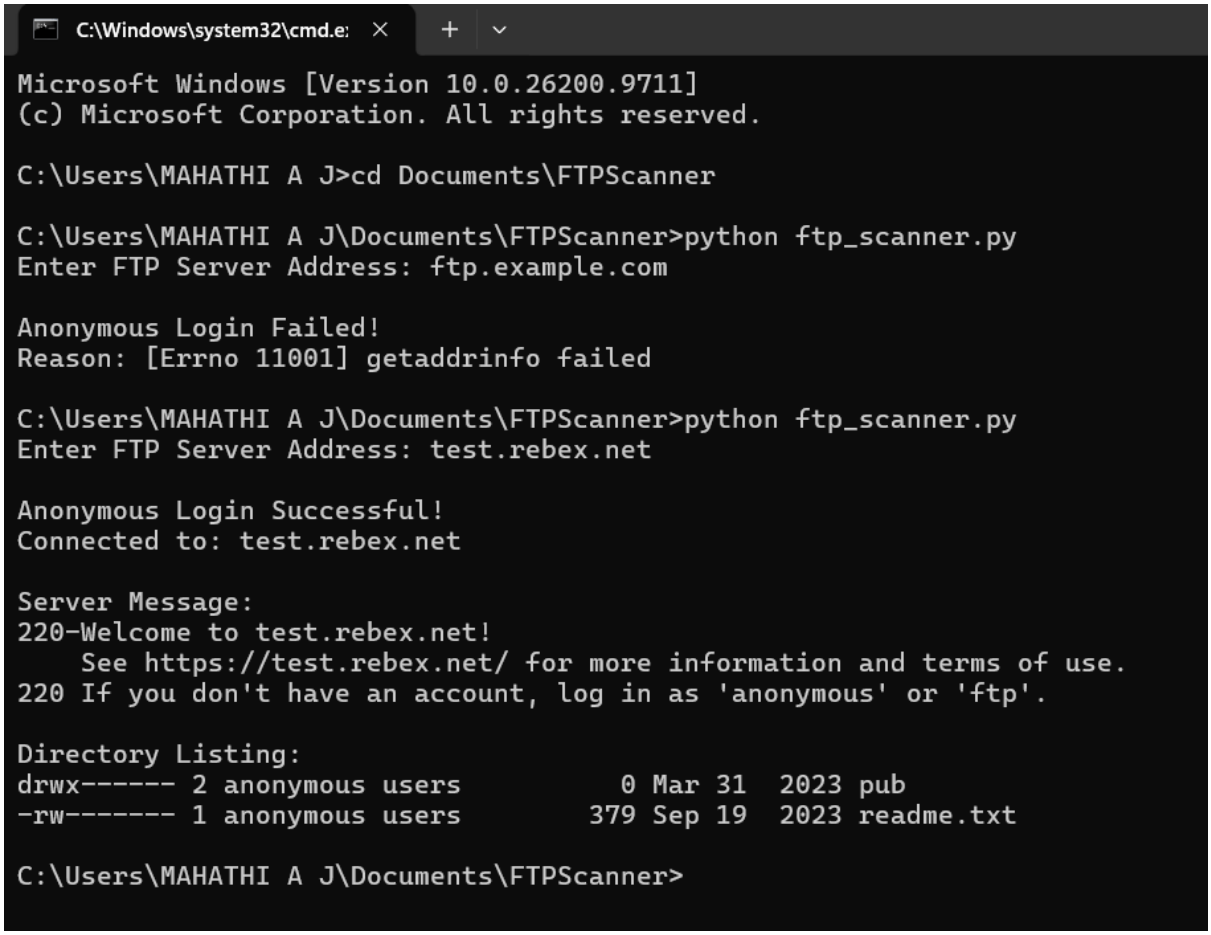

• Internet Connection

Software

• Windows 10/11 or Ubuntu Linux

• Python 3.8 or above

• Visual Studio Code (VS Code) / IDLE / PyCharm

ftp_scanner.py - C:/Users/MAHATHI A J/Documents/FTPScanner/ftp_scanner.py (3.14.0)

File Edit Format Run Options Window Help

```
from ftplib import FTP

server = input("Enter FTP Server Address: ")

ftp = None

try:
    ftp = FTP(server, timeout=10)

    ftp.login("anonymous", "anonymous@example.com")

    print("\nAnonymous Login Successful!")
    print("Connected to:", server)

    print("\nServer Message:")
    print(ftp.getwelcome())

    print("\nDirectory Listing:")
    ftp.retrlines("LIST")
    ftp.quit()
    ftp = None

except Exception as e:
    print("\nAnonymous Login Failed!")
    print("Reason:", e)

finally:
    if ftp is not None:
        try:
            ftp.close()
        except Exception:
            pass
```
